EDUCATION

B.Sc. in Computer Science • Ashkelon Academic College

10/2023 - Present

- **GPA:** 89
- **Key courses:** Data Structures, OOP 1 & 2, Databases, Algorithms 1 & 2, Operating Systems, Networks

“Magshimim” Program • Cyber Education Center

01/2017 - 01/2020

SKILLS

Programming Languages & Databases: Java, Python, JavaScript, C#, SQL

Frameworks & Tools: Git, Docker, Spring Boot, Flask, Pandas, Scapy, React, Vite, JavaFX, Postman, MySQL

Core Tech & Concepts: REST APIs, HTTP/HTTPS, MQTT, JSON, OOP, System Design, Agile

PROJECTS

License Plate Scanner – Automatic Number Plate Recognition

Python · TensorFlow · OpenCV · Flask · UDP Sockets · SQL

- Architected a distributed client-server system over UDP sockets with JSON serialization, routing live video at **30 FPS** through a TensorFlow / OpenCV inference pipeline (**5–10 FPS** during active detection)
- Built a Flask REST API backend persisting recognition events to a SQL database, achieving **85–90%** character-level accuracy on Israeli plates trained on a **300-image** dataset

IntrusionSense IDS

Python · Scapy · Pandas · Random Forest · TCP/IP

- Built a real-time packet capture engine (Python / Scapy) monitoring live TCP/IP traffic through a two-stage pipeline — binary triage (normal / suspicious) feeding into a **6-class** attack type classifier
- Implemented a two-layer pipeline: Decision Tree binary triage feeding into a Random Forest 6-class classifier (Pandas) achieving **93–100%** precision across 6 attack categories, with sub-500ms alert latency on live network flows

Escape Room Booking and Management System

Java · Spring Boot · MySQL · JavaFX · React · REST APIs

- Engineered a Spring Boot RESTful backend with a normalized MySQL schema and a JavaFX admin client, exposing **6** REST endpoints to manage real-time booking state across room configurations
- Developed a React + Vite SPA consuming RESTful APIs, delivering a live booking calendar with real-time room availability rendering for operators

Battleship Hybrid Interactive Game

C# · .NET · WPF · MQTT · Hardware-Software Integration · State-Machine Logic · UI Development

- Architected a hardware-software bridge connecting a **50-cell** sensor-equipped physical Battleship board to a C#/WPF digital engine via MQTT, synchronizing real-time game state across physical and digital layers
- Implemented a **5-state** machine covering ship placement validation and **2-team** multiplayer logic, with custom sprite animation caching for smooth UI rendering across all game states

VOLUNTEERING & LEADERSHIP

Military Service — Field Intelligence Corps, IDF

12/2020 - 08/2023

- Led and managed a 6-person squad within the Field Intelligence Corps, coordinating real-time mission objectives, logistics, and personnel across high-pressure operational environments
- Released as Staff Sergeant following 3-year service, demonstrating sustained leadership reliability and mission-critical judgment directly applicable to engineering team collaboration and execution under pressure

Languages

Hebrew – native language | English – full professional proficiency | Russian – professional proficiency
